

Log in instructions for submitting task lists online.

<http://dms.sbsplanet.com/>

Click Engineer under the Dell Team

Log in using your SBS login just like you would to my planet.

You should see a list of outstanding task lists.

Select it and fill out the form that follows

Please note

The notes section is mainly for describing items if you selected “misc” in any of the task drop downs and has a 1000 character limit.

Once you submit it just close the window and if you refresh the main page with the list the engagement you submitted should go away from the list.

If you accidentally click on one you have already submitted it will not be visible and you should get a note stating you have already submitted it.

DMS Engineer Portal FAQ

1. Does it work with Fire fox – **No only with IE 6 – Please note only IE 6 is supported by SBS**
2. What if there was more than one engineer on the job. For example the Pixar job? I do not see where I could add in the other engineers, since in the past only the lead had to fill out a TaskList. - **DMS will automatically close out the jobs for all engineers assigned to that particular Dexterra id.**
3. Sometimes I get DMs or PMs that are not on our list. Either they are new or part of a Dell department we don't normally work with, etc. Can I add a new DM/PM, and/or just write in the new name in that field? In the past I would just add the name to the list at the end of the spreadsheet. – **If DMS is missing a DM please email dmssupport@sbsplanet.com**
4. How soon will recently completed jobs show up? I am finished but they are not in there yet. I assume it is still a manual process on your part to get these jobs input in the first place. – **The projects will show up after you have submitted your CAF to Tara and she has recorded it. You should see your Task List within 24 hours after you have submitted your CAF**
 - a. Both jobs mentioned above were worked at the same time and location. I assume they will still be listed separately in the DMS? – **Yes you will need to submit a task list per Dexterra id**
5. Are you no longer tracking weekend work, travel type, and regions? - **Weekend work, regions, travel type are still being tracked. The regions are automatically figured out by DMS when the project is scheduled. The Travel type is recorded off the Travel**

requests since they now get generated from DMS. Weekend work is also figured out by DMS when scheduled.

6. It would be nice if there was a local client that could then be sync'ed once we are online. - As of right now DMS is a web application. Not sure if we will develop a client side. But you never know
7. But, since you can get the dexterra ID, can't you also get the PM name? - Due to the backend requirements and the information that is tracked the DM info cannot be entered until the task list
8. Tasklists are due 24 hours after the job is finished and most will not have the EOE completed in that first 24 hours. So you have to click yes to having submitted a EOE (or risk engineers not submitting the Task list till they finish EOE) when most of the time it is not done. - In order to make it easier on everyone we are going to go to a 3 day policy for Task lists also. This will fix the issue you pointed out. In order to ensure timely completion of the EOE's we are making the checkbox mandatory when submitting Task lists.
9. Is there a save function? I normally do the task list in advance and edit while doing job for those unseen problems. Just a thought. Other then that it is a lot faster and simpler this way. A one stop shopping endeavor if you will pardon the analogy - No save button but maybe in the future
